
Same Loa mass–redshift weights across every curve within each panel; Δz = 0.01; shared cells ≥80 galaxies/arm.
DECam filters integrate a smooth continuum fitted to dust-free TNG griz; no measured spectra or dust model.
Fiber flux uses stellar half-mass radius as a light-radius proxy, Sérsic n=1 or 4, and 1″ seeing.
R7 truth versus posterior-mean trace ranks; SFR definitions and epoch remain unmatched. Bands: conditional 95% spatial intervals.
