
Loa: 0.20 ≤ z < 0.30; CG15 properties; ranks also controlled within Δz = 0.01. TNG: z = 0, instantaneous SFR.
Shared threshold sSFR < 10^{-11} yr^{-1}; 0.25-dex mass bins; both samples capped at log M < 11.5.
Shading: 95% spatial intervals. TNG predictions are three-fit geometry-only MLPs, not GAT/SBI.
Equal rank groups do not imply equal physical environments; matching mass does not match epoch, luminosity or SFR measurement.
