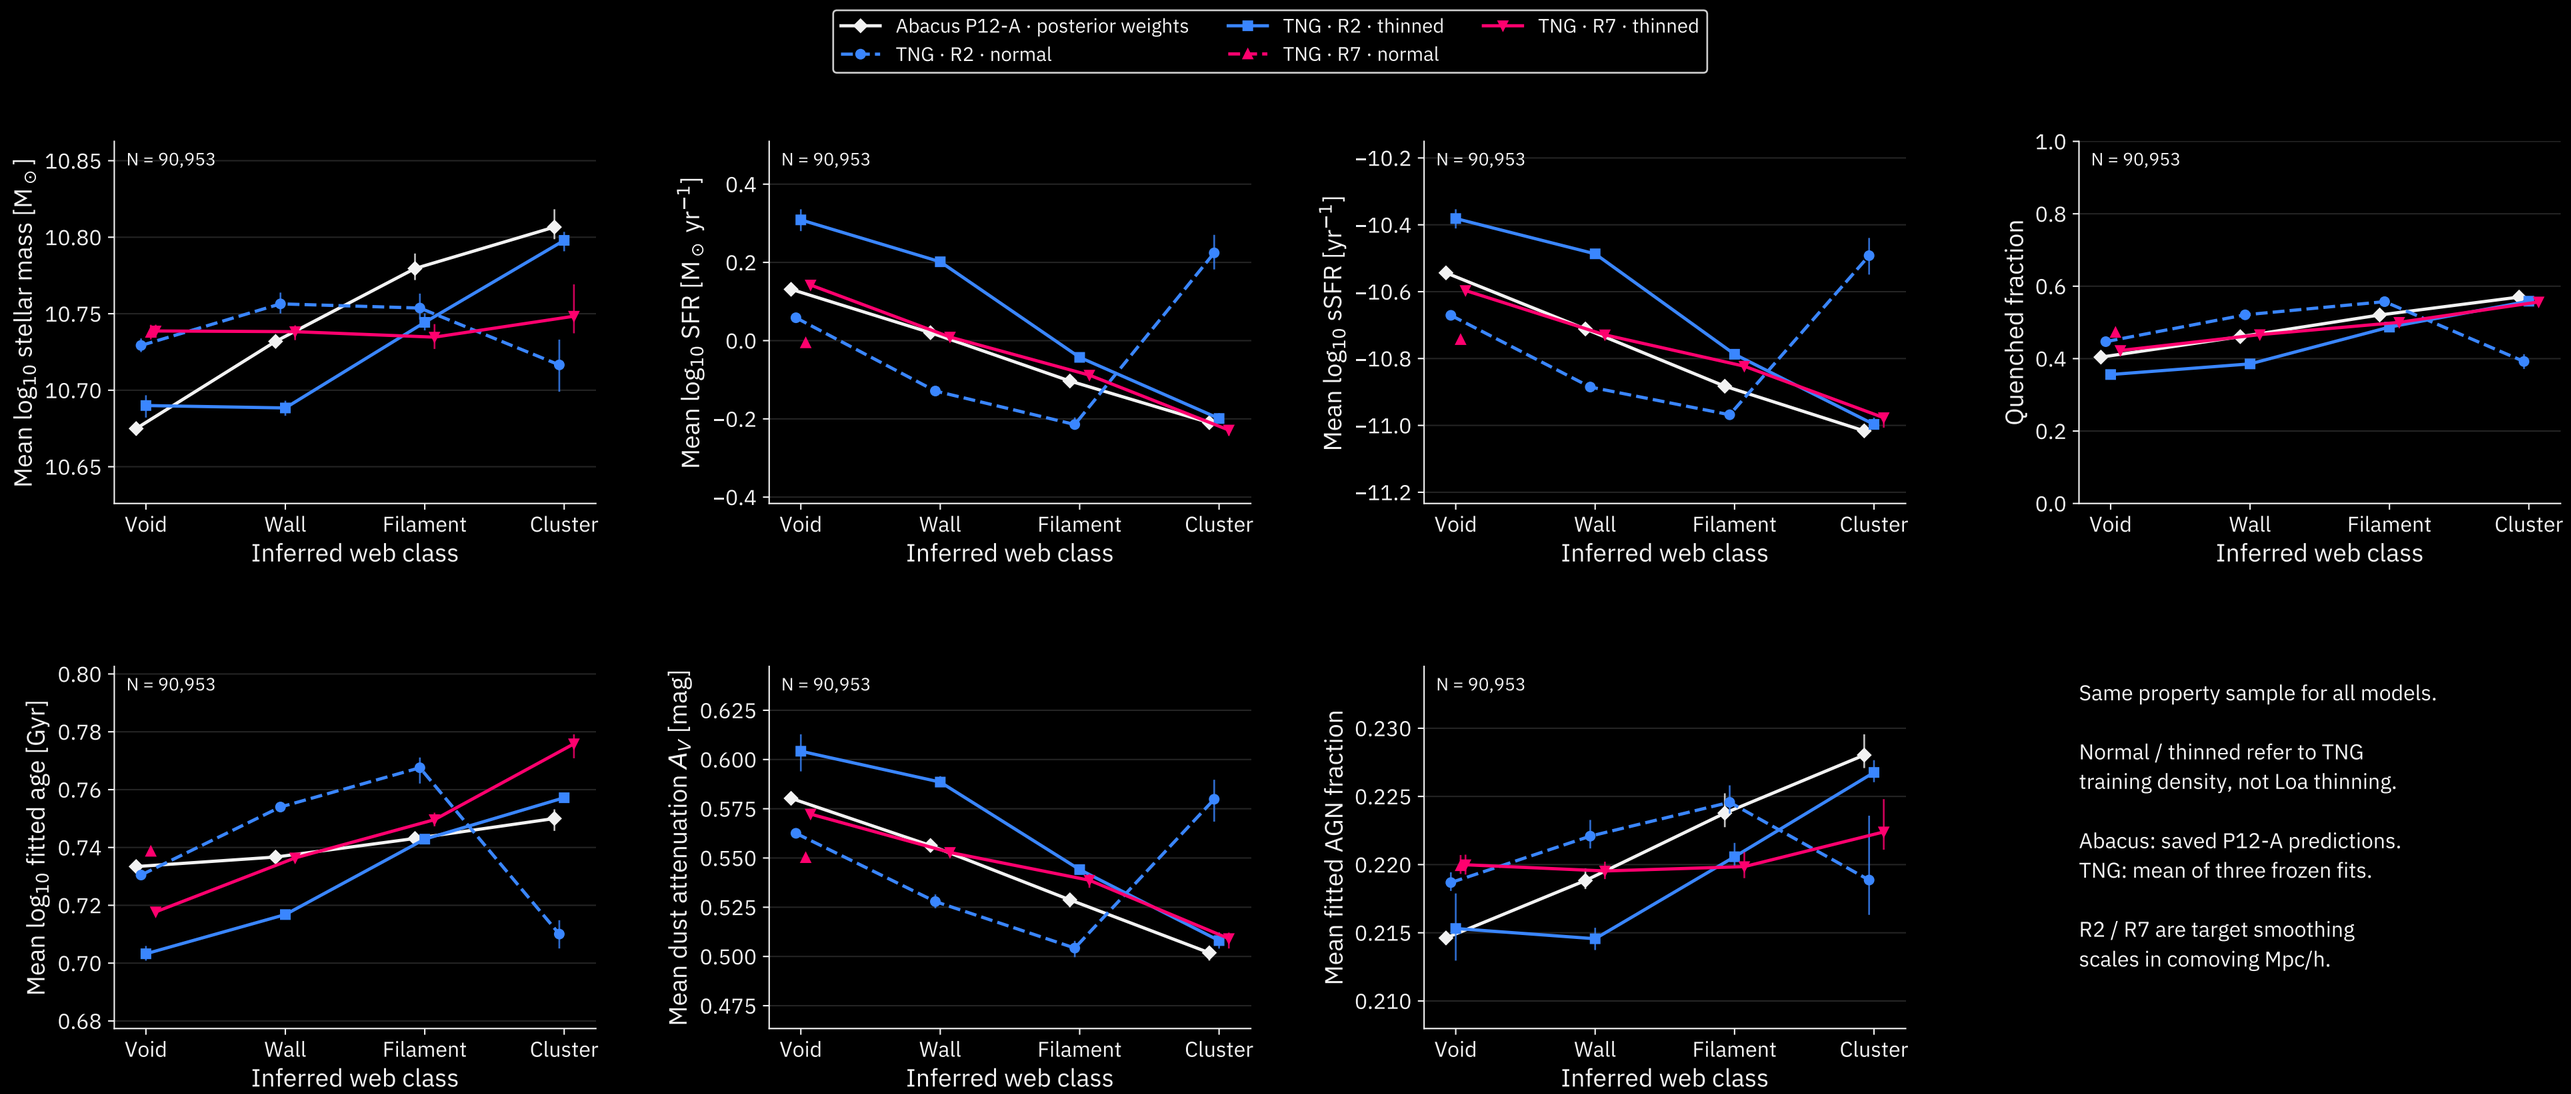
Loa properties versus inferred web class

Same DESI Loa galaxies · 0.20 ≤ z < 0.30 · CIGALE 15-band properties



Same property sample for all models.

Normal / thinned refer to TNG training density, not Loa thinning.

Abacus: saved P12-A predictions. TNG: mean of three frozen fits.

R2 / R7 are target smoothing scales in comoving Mpc/h.

Raw selected-sample means; stellar-mass and redshift mixtures are not balanced.

Abacus: posterior-probability weights. TNG: classes of mean predicted eigenvalues. Empty classes remain gaps.

Bars: 16–84% paired sky-block bootstrap · zero-shot transfer; inferred environments are not calibrated observational truth
