Filament
Cluster

0.15 ≤ z < 0.20 · log M★ ≥ 10.60
Common support: 533,037 (99.8%); 55 cells

0.20 ≤ z < 0.22 · log M★ ≥ 10.69
Common support: 231,388 (99.7%); 22 cells

0.20 ≤ z < 0.30 · log M★ ≥ 10.96
Common support: 607,579 (99.4%); 81 cells

Before weighting
Common-support density [mag⁻¹]

Mass/redshift matched
Density [mag⁻¹]

Cluster − void mean colour
+0.0372 [+0.0342, +0.0402] mag

Cluster − void mean colour
+0.0374 [+0.0333, +0.0411] mag

Cluster − void mean colour
+0.0374 [+0.0349, +0.0395] mag

Matched − pooled matched
Density difference [mag⁻¹]

Observed g − r [mag]

Same retained galaxies before/after weighting; all four environments share the pooled joint cell distribution.
Bands: pointwise conditional 95% sky-block bootstrap, refitting weights with fixed cells/target. Pooled curve: equal mean of four classes.
All finite colours enter normalization; display zoom 0.3–1.9 mag. Observed colours/CIGALE masses; no causal or calibration claim.
