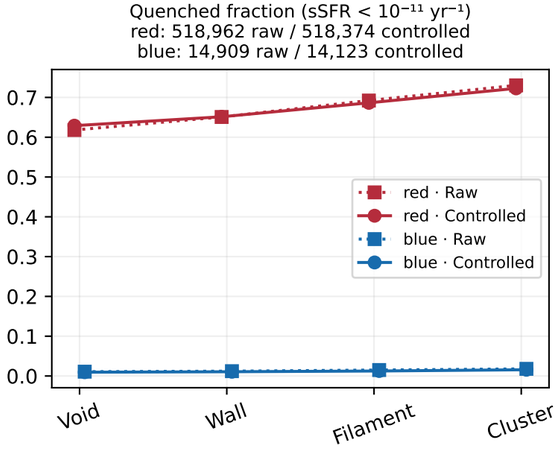
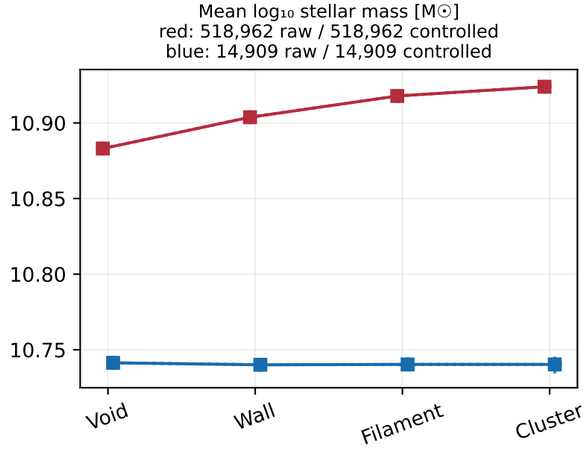
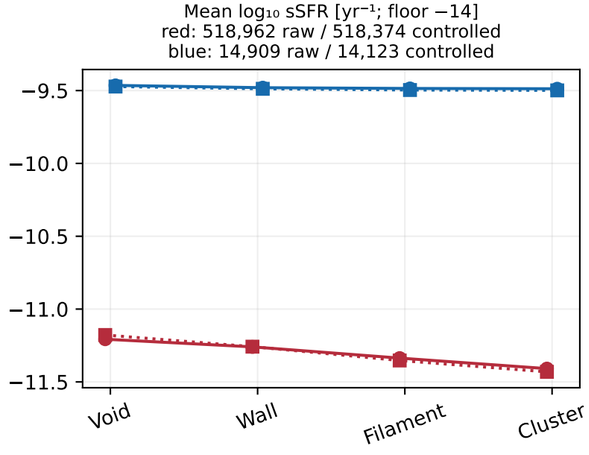
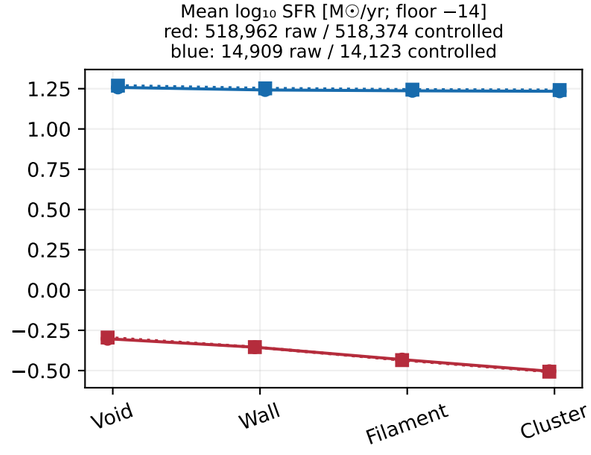
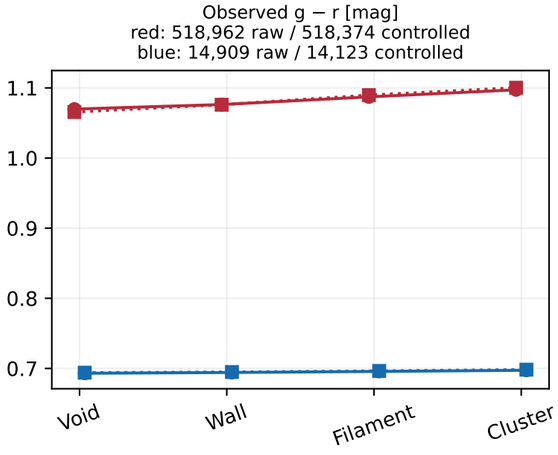
Loa 0.15 ≤ z < 0.20 · log₁₀ M★ ≥ 10.60
Red: 0.75 < g−r < 1.5; blue: g−r < 0.75 · inferred environment probabilities
Solid: mass/z control within each colour (mass panel: z only); dotted: raw · 95% sky-block intervals

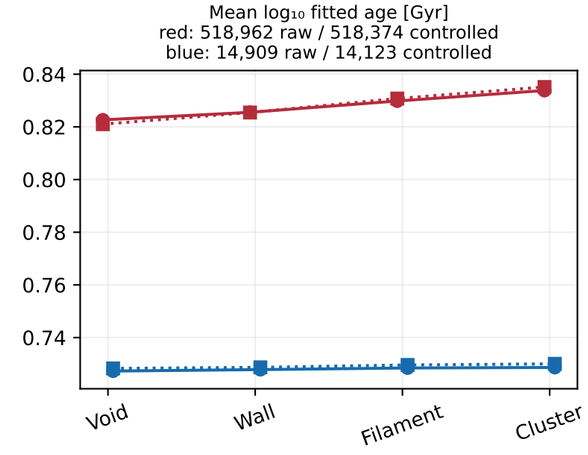


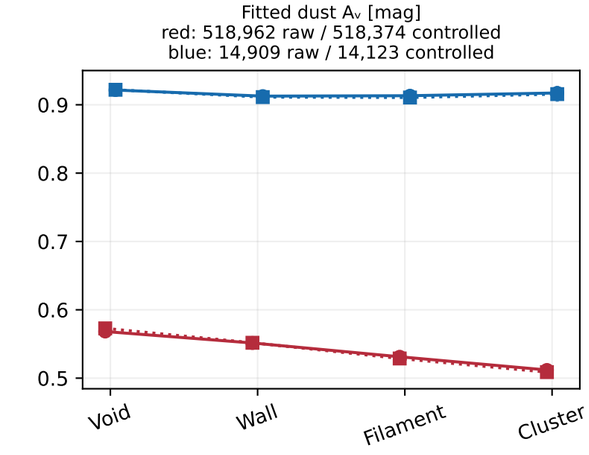


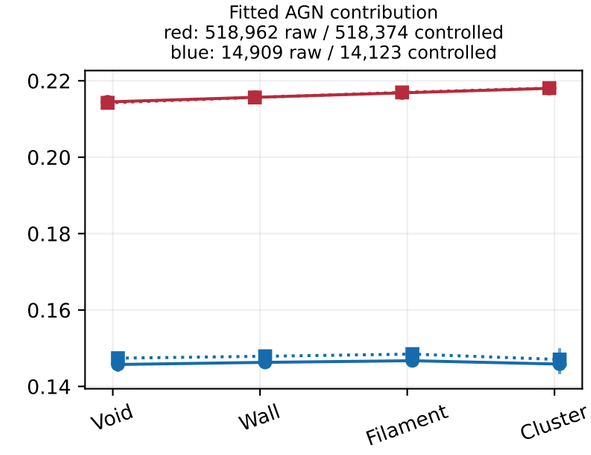












Red/blue controlled curves have different support. These are within-population associations.
