Observed colour distributions by inferred environment
Highest-probability environment · original CIGALE mass selections

Void — Wall — Filament — Cluster

0.15 ≤ z < 0.20
log₁₀ M★/M⊙ ≥ 10.60

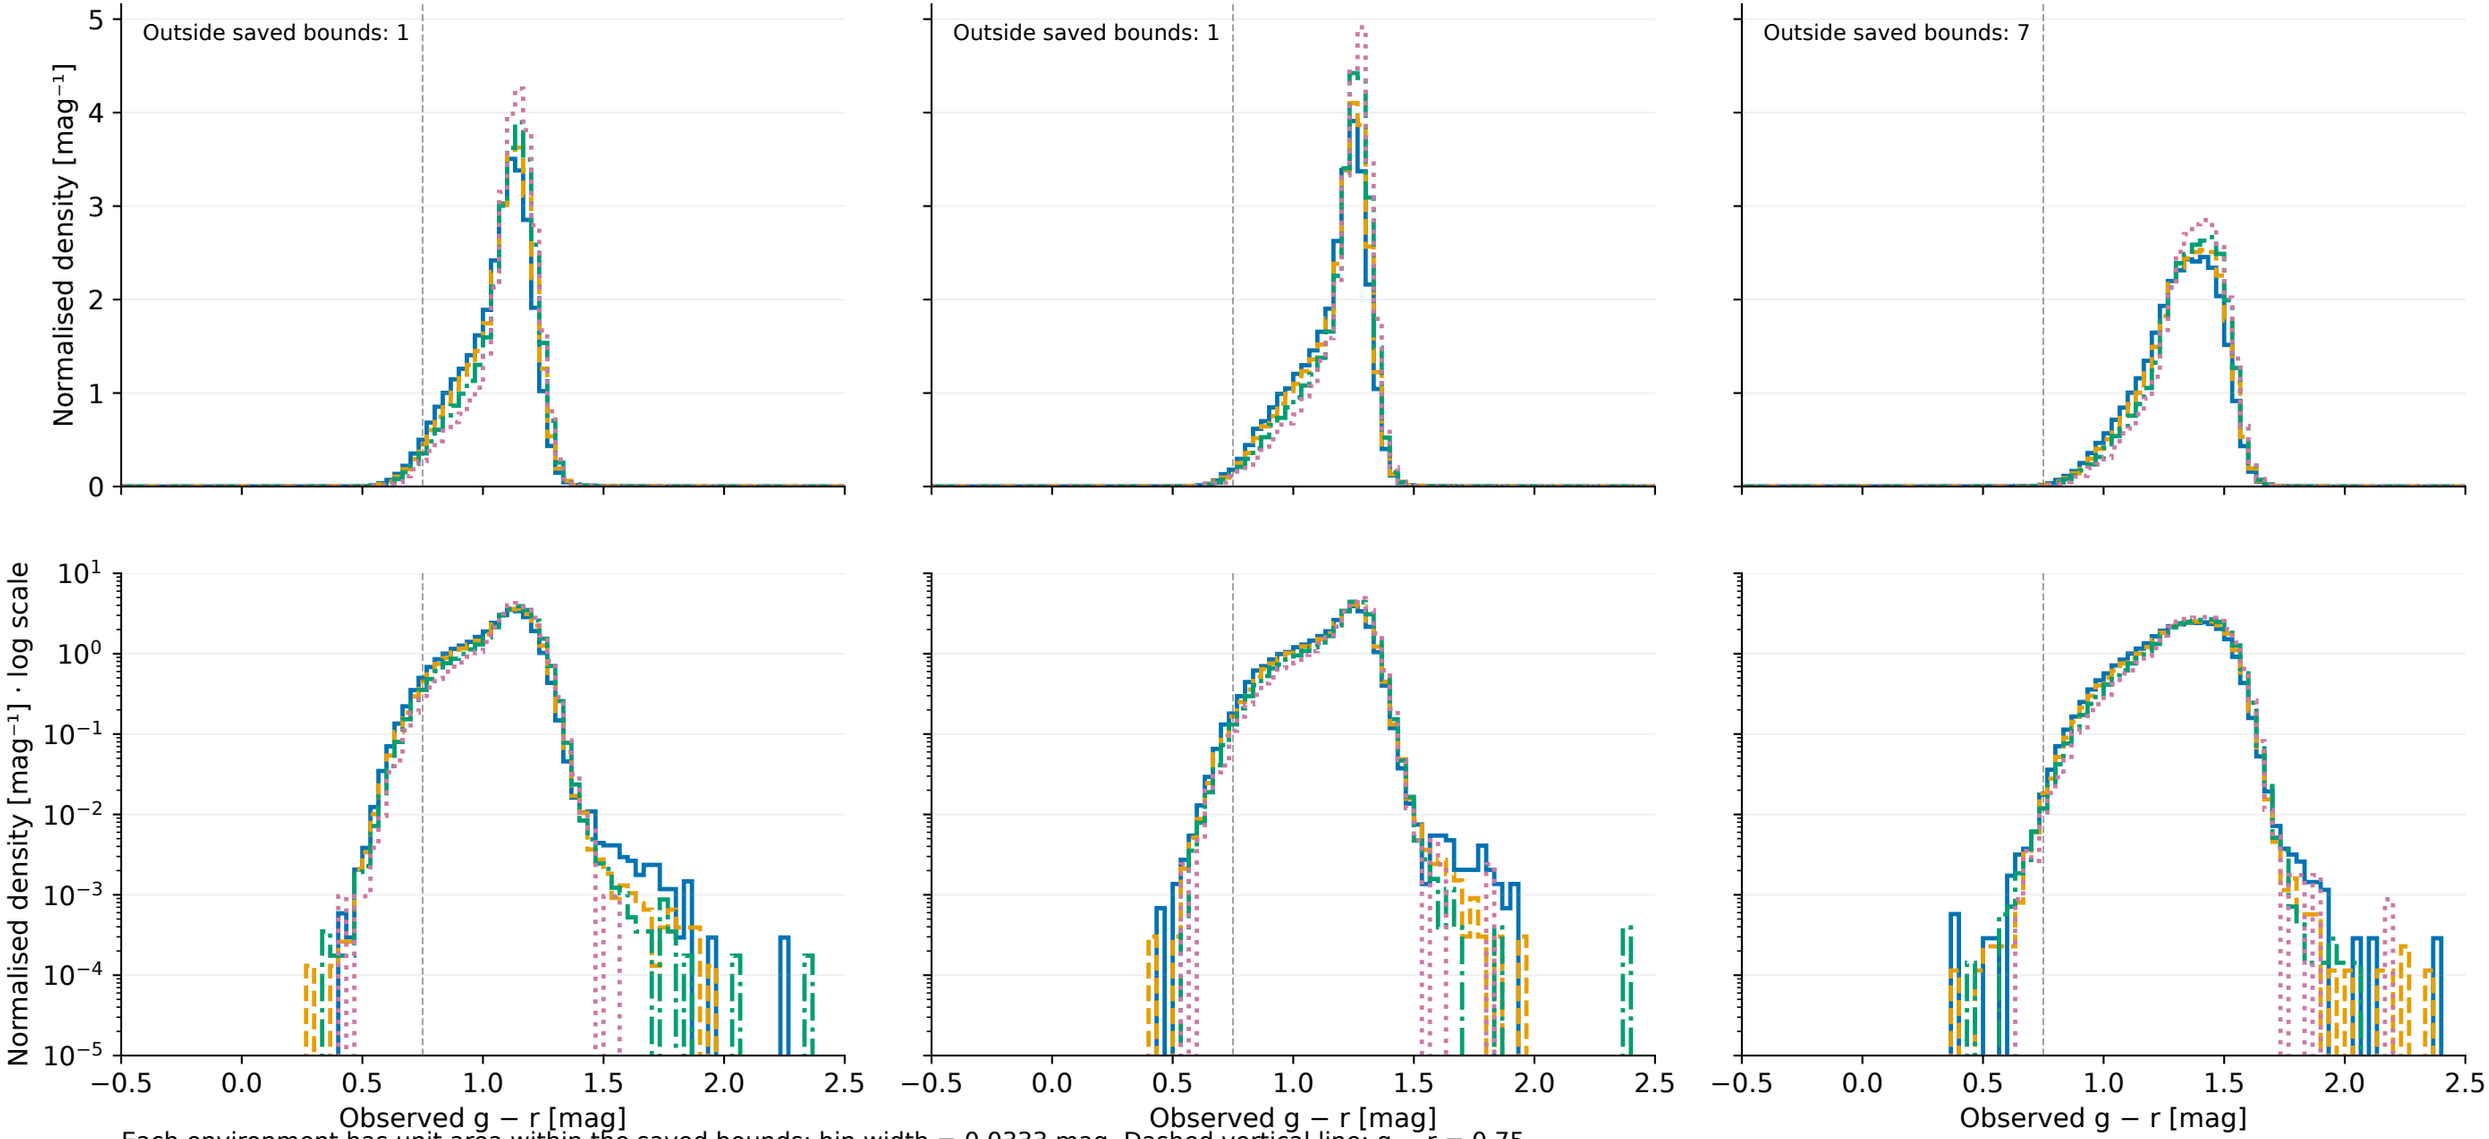
Outside saved bounds: 1

0.20 ≤ z < 0.22
log₁₀ M★/M⊙ ≥ 10.69

Outside saved bounds: 1

0.20 ≤ z < 0.30
log₁₀ M★/M⊙ ≥ 10.96

Outside saved bounds: 7



Each environment has unit area within the saved bounds; bin width = 0.0333 mag. Dashed vertical line: g − r = 0.75.
Lower panels repeat the same histograms on a log scale. Raw distributions: no mass/redshift matching or volume weighting.
Saved bounds: 10.3 ≤ log₁₀ M★/M⊙ ≤ 12.5 and −0.5 ≤ g − r ≤ 2.5. Higher-redshift windows overlap.
