Normalised density [mag⁻¹]

Normalised density [mag⁻¹] · log scale

Observed g − r [mag]

Each environment has unit area within the saved bounds; bin width = 0.0333 mag. Dashed vertical line: g − r = 0.75.
Lower panels repeat the same histograms on a log scale. Raw distributions: no mass/redshift matching or volume weighting.
Saved bounds: 10.3 ≤ log₁₀ M★/M⊙ ≤ 12.5 and −0.5 ≤ g − r ≤ 2.5. Higher-redshift windows overlap.
