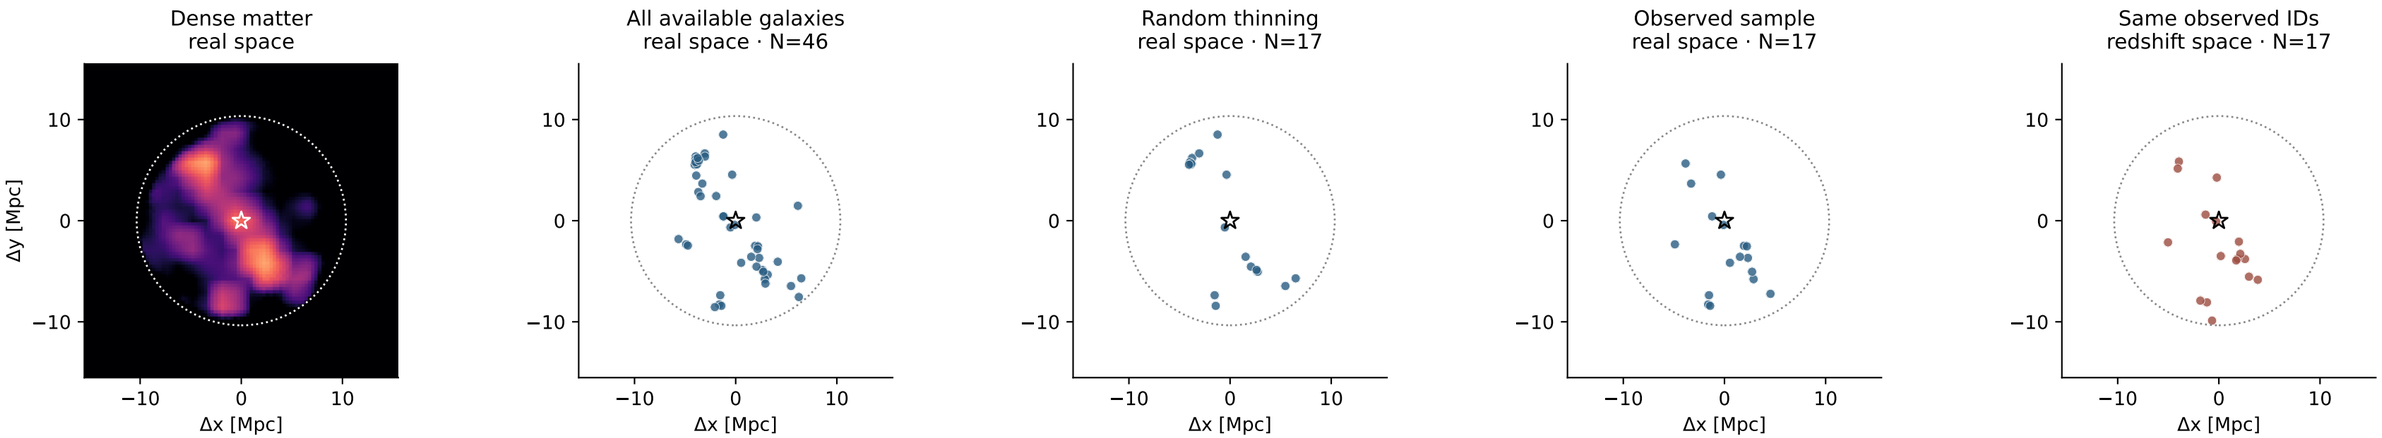
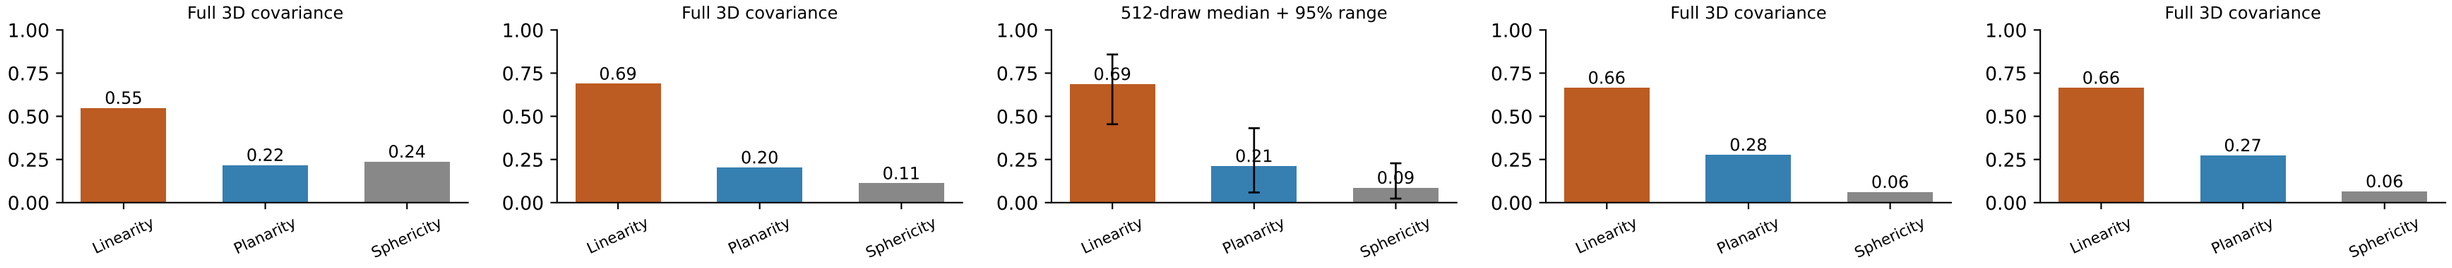
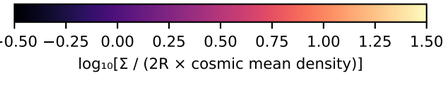
Same mock region · TARGETID 6032112 · R = 7/0.6766 Mpc

Matter → galaxies → random thinning → actual observation selection → redshift distortions







Fixed first thinning draw shown; bars summarize 512 draws. Thin and observed samples need not contain the same IDs.
Last two columns use identical IDs selected in the observed redshift-space R sphere; real positions may lie outside R.
10% particle TSC matter grid, 0.977 Mpc/h resolution. These are tracer geometry statistics, not tidal classes.
